(54) Title: **NOVEL COMPLEXES FOR INDUCING AN IMMUNE RESPONSE**

(57) Abstract: The invention relates to induction of immune responses against target antigens using Fas ligand as an adjuvant. Melanoma cell lines transfected with FasL are shown to be rejected more efficiently than untransfected cells, and rejection is shown to be antibody-mediated. The invention provides immune complexes comprising target antigens and Fas ligand, pharmaceutical compositions comprising such immune complexes, and methods for generating immune responses, as well as methods for identifying cell-specific antigens, particularly tumour specific antigens, using cells expressing FasL.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *G* document member of the same patent family
